# Basic Linux Course

---

This outline covers the fundamentals of working with Linux, including the command line, file and directory management, user accounts and permissions, basic system administration tasks, and an introduction to scripting.

## COURSE OBJECTIVE

---

- Understand the basic concepts of Linux
- Navigate the Linux file system
- Use basic Linux commands
- Manage users and permissions
- Perform basic system administration tasks
- Write simple shell scripts

## DURATION:

---

Course Outline:

---

### Day 1: Linux Fundamentals

- Module 1: Introduction to Linux

- Overview of Linux and distributions
  - Installation of a Linux distribution (Lab Setup)
- Module 2: Basic Command Line Usage
  - Navigating the file system
  - File and directory manipulation commands

---

## **Day 2: Essential Commands and File Management**

- Module 3: Text Editors and Shell Basics
  - Introduction to text editors
  - Basic shell scripting concepts
- Module 4: File System Hierarchy and Processes
  - Understanding the Linux file system hierarchy
  - Managing processes and jobs

---

## **Day 3: Users and Permissions**

- Module 5: User Management
  - Creating and managing user accounts
  - Group management and permissions
- Module 6: Advanced Permissions and ACLs
  - Understanding advanced permissions
  - Implementing Access Control Lists (ACLs)

---

## **Day 4: Networking Basics**

- Module 7: Networking Fundamentals
  - Overview of networking concepts
  - Configuring network interfaces
- Module 8: Remote Access and File Transfer
  - SSH basics
  - Transferring files using SCP and SFTP

---

## **Day 5: System Administration Basics**

- Module 9: System Maintenance and Updates
  - Managing packages with package managers
  - Updating the system
- Module 10: Backup and Restore
  - Creating backups with tar and rsync
  - Introduction to system snapshots

---

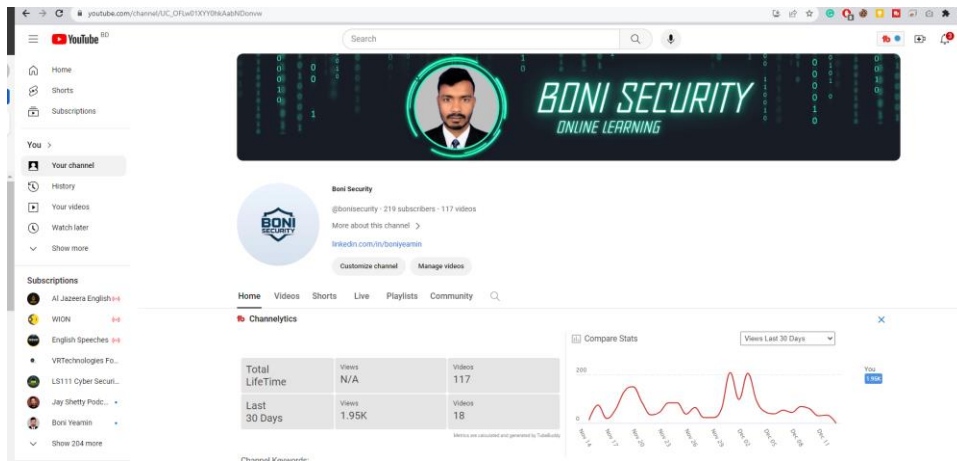

## **Day 6: Shell Scripting and Automation**

- Module 11: Introduction to Shell Scripting

- Basics of shell scripting
- Writing simple scripts to automate tasks
- Module 12: Cron Jobs and Automation Tools
  - Scheduling tasks with cron
  - Introduction to automation tools (Ansible, Puppet, etc.)

## Day 7: Security and Conclusion

- Module 13: Basic Security Practices
  - Overview of Linux security features
  - Securing SSH and network services
- Module 14: Course Review and Q&A
  - Recap of key concepts and commands
  - Open discussion and Q&A session
